Glucagon® Test

1. What is a common side effect of Glucagon® administration?
 - a. Sweating
 - b. Diarrhea
 - c. Rapid pulse
 - d. Vomiting

2. Which of the following is considered a severe low blood sugar or insulin shock?
 - a. Frequent urination
 - b. Flushing of skin
 - c. Thirst
 - d. Seizure

3. What is the best sequence of events for the administration of Glucagon® to a student when you are working with another school colleague present at the scene?
 - a. Apply gloves, mix the liquid and powder, administer the medication, turn on side, call 911 and parents.
 - b. Call 911 and parent, apply gloves, mix liquid and powder, and administer medication, turn on side.
 - c. Mix the liquid and powder, apply gloves, administer medication, turn on side, call 911 and parent.
 - d. None of the options are correct because I do not need to call 911.

4. If a student with type 1 diabetes comes to you with complaints of a headache, hunger, and the appearance of an unsteady gait and sweaty skin, what should be your first step?
 - a. Have the student drink a fast acting sugar
 - b. Call the school nurse
 - c. Have the student sit down and rest
 - d. Give Glucagon®

5. Typically Glucagon® is part of the plan of care for students with the following type of diabetes?
 - a. Type 1 diabetes
 - b. Type 2 diabetes
 - c. Both type 1 and type 2 diabetes
 - d. None of the above
